### Test Information:

Sample description: See photo

**Test item:** Effect of a castor chair

**Test method:** EN 425: 2002

### Test condition:

Inspect the surface of the castors, and if necessary, clean them with a cotton pad impregnated with denatured ethanol, and dry. Pre-clean the test piece with a vacuum cleaner.

Fix the base for the test piece on the circular plate, and lower the triangular platform to allow the castors to come into contact with the test piece. Preset the counter for 25000 revolutions of the plate and set the apparatus in motion with the suction nozzle being operated continuously.

At the end of the test, examine the test piece for appearance change from a distance of approximately 800 mm at an approximate angle of 45° and from all directions by slowly rotating the viewing table.

There should not be any damage caused by detachment of layers, opening joints, or crazing. Ignore any flattening or change in appearance, e.g. change in gloss.

**Test result:** No visible damage

Note: All test specimens were cut from the sample.
